

Coding & Marking Solutions

Dairy Industry

Reliable Coding Equipment, Clear Codes & Flexibility For Your Current & Future Needs

The dairy industry is seeing unprecedented pressures, both with the need for increased traceability of products and measures to increase output while decreasing costs. And as conditions continue to evolve, there is an added requirement of being nimble. Marking and coding equipment should alleviate some of these pressures and be a seamless addition to your production floor. This equipment should allow for additional coding information to be easily added to current products, regardless of substrate. Equipment for the dairy industry must also be robust and reliable in the harshest environments while reducing operator interactions. Most importantly, dairy manufacturers want a partner who can guide them through new regulatory requirements, operator safety and better efficiencies in their coding and marking equipment.

Under Tomorrow's Coding Solutions For Your Peace of Mind Today:

At Hitachi, the focus over our 110+ years in business has been on exceptional products that are reliable time and time again. Coding and marking equipment from Hitachi can be easily integrated into your lines and current protocols. Operators can quickly understand the intuitive interface to run the equipment. And your manufacturing lines can be running back to full production mode in no time.

With new demands on manufacturers for fewer operators and faster production lines, Hitachi coding and marking equipment can assist with additional features. Several protocols are standard in our coding solutions, making IT integration into existing production lines quick and easy. The robust design of our equipment ensures less downtime, even in the harshest conditions, which also reduces unnecessary operator interaction. Clear coding can be printed on a variety of substrates, so when a product line grows in the future, Hitachi coding solutions will continue to provide crisp and readable codes.

Coding and marking solutions from Hitachi also impact total cost of ownership, from reduced coding equipment downtime, crisp codes at higher production line speeds, and less operator interaction.

Contact Hitachi to learn more about tomorrow's coding solutions for your peace of mind today.
